Three UCSB Graduate Students to Receive Department of Energy Fellowships

Three graduate students at UC Santa Barbara have been chosen to receive prestigious graduate fellowships of \$50,500 per year, for up to three years, from the Office of Science Graduate Fellowship Programs at the U.S. Department of Energy (DOE).

The students are Elizabeth Mullin in physics, and Maxwell Robb and Jessica Sherman in chemistry. They are among 150 students to receive the awards nationwide.

"These awards are tremendous honors for these students and are a testament to their talent and initiative," said Gale Morrison, dean of UCSB's Graduate Division.

"This fellowship support will facilitate the realization of their educational and research objectives here at UCSB."

According to the DOE, the fellowship award "provides partial tuition support, an annual stipend for living expenses, and a research stipend for full-time graduate study and thesis/dissertation research at a U.S. academic institution for three years." The award may also cover research materials and travel to research conferences or DOE scientific user facilities.

The support comes in part from the American Recovery and Reinvestment Act.

About UC Santa Barbara

The University of California, Santa Barbara is a leading research institution that also provides a comprehensive liberal arts learning experience. Our academic community of faculty, students, and staff is characterized by a culture of interdisciplinary collaboration that is responsive to the needs of our multicultural and global society. All of this takes place within a living and learning environment like no other, as we draw inspiration from the beauty and resources of our extraordinary location at the edge of the Pacific Ocean.
